A photograph of an industrial facility, likely a hazardous and radioactive waste treatment plant. The scene features a large, dark, cylindrical storage tank or reactor vessel mounted on a multi-axle trailer. To the right, there is a complex structure with a tall, silver-colored vertical chimney or stack. Various pipes, walkways with yellow safety railings, and structural steel beams are visible. The ground is a flat, reddish-brown dirt surface. The sky is blue with scattered white clouds.

Unit Operations in Environmental Engineering Robert Noyes, 1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows 1 Biological Technology 2 Chemical Technology 3 Containment and Barrier Technology 4 Immobilization Technology 5 Membrane

Technology 6 Physical Technology 7 Radiation and Electrical Technology 8 Thermal Destruction Technology Traditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance However such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies
