Risk Assessment

Peter LaGoy, 1994-12-31 Site specific risk assessment is the process of evaluating whether or not a site poses a risk to human health or the environment The purpose of all hazardous waste site remediation is ultimately to render a site safe for human or ecological populations Consequently risk assessment as the process used to measure the effectiveness of the remediation process is critical to all hazardous waste site work Risk assessment at hazardous waste sites involves the use of standard approaches and assumptions in a reasoned common sense manner The purpose of this book is to provide practical guidance to people wishing to learn about conduct or use risk assessment procedures in evaluating hazardous waste sites Critical issues standard formulas and assumptions and guidance on characterizing risk results in a useable manner are presented The use of risk assessment as a key tool in selecting appropriate remedial options at hazardous waste sites is also described Most attention is given to human health risks associated with exposure to toxic chemicals but descriptions of the strategies used to estimate radiation health risks and to evaluate risks to the environment are also provided Although most commonly applied to hazardous waste site remediation the procedures outlined in this book are generally applicable to any situation involving a potential for health risks to an exposed population This book provides guidance on the mechanics of risk assessment preparation and illustrates these approaches with examples However the focus of the book is on the subjective nature of risk assessment the art rather than

the science The actual risk i e the right answer can never be known Consequently while it is valuable to attempt to obtain the best numeric solution reasonableness and the application of common sense are equally important The book therefore devotes a substantial amount of space to issues of uncertainty that are inherent in risk assessment and the need to address this uncertainty

Risk Assessment at Hazardous Waste Sites American Chemical Society,1982 **Integrating Insurance and Risk Management for Hazardous Wastes** Howard Kunreuther,M.V. Rajeev Gowda,2012-12-06 A challenge facing society today is how to develop a meaningful strategy for integrated hazardous waste management Meeting this challenge was the principal motivation for the conference on Risk Assessment and Risk Management Strategies for Hazardous Waste Storage and Disposal Problems held at the Wharton School of the University of Pennsylvania on May 18 19 1988 The conference brought together representatives from the major interested parties environmentalists government insurance law manufacturing and the university community who have been concerned with the waste management process The conference was the third cosponsored by the Wharton Center for Risk and Decision Processes addressing the knotty problem of hazardous waste The first held at the International Institute for Applied Systems Analysis in 1985 examined the transportation storage and disposal of hazardous materials It suggested steps that industry insurers and government agencies could take to improve the safety and efficiency with which hazardous materials are produced and controlled in industrialized societies Specifically it focused on the risk management tools of insurance compensation and regulation xv xvi

PREFACE The second conference held at the Wharton School University of Pennsylvania in 1986 concentrated on the role of insurance and compensation in environmental pollution problems It characterized a set of problems related to the environmental pollution liability insurance crisis as presented by key interested parties and proposed a set of research needs for providing a sound basis for constructing socially appropriate measures to deal with the problem
