Water Management in Petroleum Industries Somnath Basu, Andrew R. Shaw, Mudumbai Venkatesh, 2025-08-03 This book provides a roadmap for sustainable development and growth of petroleum industry with respect to water usage and discharge. Water and energy are intricately tied with each other. As a major source of conventional energy, petroleum industries upstream, midstream, and downstream are collectively large consumers of water. Increasing water stress in major parts of the world has made the industry aware of the impact of usable water on different sectors of petroleum industry, e.g., exploration and production, refining, and fuel processing. Treatment of wastewater effluents to maximize reuse is becoming a primary objective of the industry. This, coupled with the need to minimize discharge of contaminants in the effluents that affect human and aquatic life and the environment at large at reasonable cost, is emerging as an important consideration facing the petroleum industry for its sustainable development and growth in the future decades. This book discusses in detail sources of water consumed by petroleum production and processing and wastewater produced. Health and environmental effects of chemicals contained in effluent streams, effluent treatment processes, current and new innovations, and technologies for reuse. Lessons Learned from Chemical Safety Board Investigations Including Texas City, TX United States. Congress. Senate. Committee on Environment and Public Works. Subcommittee on Transportation Safety, Infrastructure Security, and Water Quality, 2011

Lees' Loss Prevention in the Process Industries Frank Lees, 2012-11-05 Safety in the process industries is critical for those who work with chemicals and hazardous substances or processes. The field of loss prevention is and continues to be of supreme importance to countless companies, municipalities, and governments around the world, and Lees is a detailed reference to defending against hazards. Recognized as the standard work for chemical and process engineering safety professionals, it provides the most complete collection of information on the theory, practice, design, elements, equipment, regulations, and laws covering the field of process safety. An entire library of alternative books and cross-referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers, and managers can be found in this all-encompassing three-volume reference. Instead, the process safety encyclopedia, trusted worldwide for over 30 years, is now available in print and online to aid searchability and portability. Over 3,600 print pages cover the full scope of process safety and loss prevention, compiling theory, practice, standards, legislation, case studies, and lessons learned in one resource, as opposed to multiple sources.

Laboratory Biorisk Management Reynolds M. Salerno, Jennifer Gaudioso, 2015-12-01 Over the past two decades, bioscience facilities worldwide have experienced multiple safety and security incidents, including many notable incidents at so-called sophisticated facilities in North America and Western Europe. This demonstrates that a system based solely on biosafety levels and security regulations may not be sufficient. Setting the stage for a substantively different approach for managing the risks of working with biological agents in laboratories, Laboratory Biorisk Management introduces the concept of biorisk management, a new paradigm that encompasses both laboratory biosafety and biosecurity. The book also provides

laboratory managers and directors with the information and technical tools needed for its implementation The basis for this new paradigm is a three pronged multi disciplinary model of assessment mitigation and performance the AMP model The application of the methodologies criteria and guidance outlined in the book helps to reduce the risk of laboratories becoming the sources of infectious disease outbreaks This is a valuable resource for those seeking to embrace and implement biorisk management systems in their facilities and operations including the biological research clinical diagnostic and production manufacturing communities
