**Not Tonight** Joanna Kempner, 2014-10-09 An insightful and eloquent account of our evolving understandings of migraine from a condition of weak nerved women to a real disease Elizabeth Mitchell Armstrong Princeton University Pain Vomiting Hours and days spent lying in the dark Migraine is an extraordinarily common disabling and painful disorder that affects over 36 million Americans and costs the US economy at least 32 billion per year Nevertheless it is a frequently dismissed ignored and delegitimized condition In Not Tonight sociologist Joanna Kempner argues that this general dismissal of migraine can be traced back to the gendered social values embedded in the way we talk about understand and care for people in pain The symptoms that accompany headache disorders like head pain visual auras and sensitivity to sound lack objective markers of distress that can confirm their existence Therefore doctors must rely on the perceived moral character of their patients to gauge how serious their complaints are Kempner shows how this subjective dimension of diagnosis has shaped the history of migraine In the nineteenth century migraine was seen as a disorder of upper class intellectual men and hysterical women In the 1940s the concept of migraine personality developed in which women with migraine were described as uptight neurotics who withheld sex Even today we see depictions of people with highly sensitive migraine brains Not Tonight casts new light on how cultural beliefs about gender pain and the distinction between mind and body influence not only whose suffering we legitimate but which remedies are marketed how medicine is practiced and how knowledge about disease is produced

*Drug-Induced Headache* Hans-Christoph Diener, Marcia Wilkinson, 2012-12-06 M WILKINSON Patients with frequent or daily headaches pose a very difficult problem for the physician who has to treat them particularly as many patients think that there should be a medicine or medicines which give them instant relief In the search for the compound which would meet this very natural desire many drugs have been manufactured and the temptation for the physician is either to increase the dose of a drug which seems to be at any rate partially effective or to add one or more drugs to those which the patient is already taking Although there have been some references to the dangers of overdosage of drugs for migraine in the past it was not until relatively recently that it was recognized that drugs given for the relief of headache if

taken injudiciously may themselves cause headache The first drugs to be implicated in this way were ergotamine and phenazone In the case of ergotamine tartrate the dangers of ergotism were well known as this was a disorder which had been known and written about for many years In the treatment of headache fully blown ergotism is rare and in recent years has usually been due to self medication in doses much greater than those prescribed although there are a few recorded cases where toxic amounts have been given      **Wolff's Headache and Other Head Pain** Stephen D. Migraine F. Clifford Rose, 1985-12-04 *Neuro-vascular Neuro-ophthalmology* Mark J. Kupersmith, 2012-12-06 Neuro ophthalmological symptoms frequently arise in disorders which alter the intracranial

and intraorbital circulation Because of the wide range of sensory and cognitive systems involved in vision and eye movements visual disturbances are typically found in the common vascular disorders such as atherosclerosis migraine and aneurysms but can also result from practically any common or rare local or systemic vascular disorder The dysfunction can be part of a largersyndrome or the predominant clinical abnormality Many of the newer concepts concerning the diagnosis and treatment of neurovascular disorders have evolved in consequence of advances in techniques for neuroimaging such as MRI methods of measuring systemic coagulation and inflammation and superselective catheterization of abnormal blood vessels and vascular lesions The neuroophthalmological evaluation of clinical signs and symptoms often leads to accurate localization and diagnosis of the lesion Many of these clinical abnormalities such as visual field defects and ocular misalignments can be quantified and followed to assess either the natural history of the disorder or the effects of therapies No one medical specialty can manage these neurovascular neuro ophthalmological disorders alone The complexity of diagnosis and treatment planning requires a multi disciplinary team This approach bringing ophthalmologists neurosurgeons and neurologists together to confer in the management of these cases has been pioneered by the authors group at the New York University Medical Center
