investigators must be familiar with both the basic concepts of mechanics and the modern tools of cellular molecular biology Unfortunately current literature contains numerous studies that misuse standard mechanical estimations and terminology or fail to implement appropriate molecular analyses Therefore the Mechanobiology Handbook not only presents cutting edge research findings across various fields and organ systems but also provides the elementary chapters on mechanics and molecular analysis techniques to encourage cross field understanding and appropriate planning Aided by the continuous advancement of research tools in both mechanics and biology more sophisticated experiments and analyses are possible thus fueling the growth of the field of mechanobiology Considering the complexity of the mechanics and the biology of the human body most of the world of biomechanics remains to be studied Since the field is still developing the Mechanobiology Handbook does not force one unified theory but brings out many different viewpoints and approaches to stimulate further research questions

**Effects of Alcohol Use on Immunity and Immune Responses** Suhas Sureshchandra, Samantha Yeligar, Derrick R. Samuelson, Ilhem Messaoudi, 2023-11-29 Alcohol use disorder AUD is a significant global health burden Globally alcohol misuse is the fifth leading risk factor for premature death and disability and accounts for 3.3 million deaths annually Chronic alcohol use deleteriously affects both normal behavior e.g. depression anxiety and alcohol craving and physiology e.g. oxidative stress intestinal hyperpermeability immune dysfunction and organ damage Both heavy and binge drinking patterns alter immune frequencies compromise immune cell function resulting in increased morbidity and mortality Alcohol misuse can damage barrier functions in vital organs such as the lungs gut increase susceptibility to both bacterial and viral infections but delay wound healing Chronic alcoholics are also at a greater risk of developing Acute respiratory distress syndrome ARDS alcoholic liver disease ALD and certain cancers A lot of progress has been made in elucidating the relationship between alcohol consumption and immune function and how it affects human health However the mechanisms by which alcohol and its metabolites interact with peripheral and tissue resident immune systems remain poorly defined Defining specific systemic adaptations and molecular mechanisms is important for understanding the long term consequences of chronic alcohol use These studies will help devise new interventions or refine existing ones to target the immune system in mitigating alcohol related diseases The aim of this Research Topic is to bring together new research in the alcohol field exploring the broad molecular and cellular adaptations of binge and heavy drinking on peripheral and tissue immunity Studies would ideally include a combination of in vitro cell line models and in vivo animal models and/or human studies of alcohol induced end organ damage mediated by dysregulated immune responses Papers in this Research Topic could be used to identify complementary mechanisms and pathways that may be the focus of future therapeutic strategies We encourage the submission of Original Research articles as well as Reviews Mini Reviews and Perspectives covering the following or related topics 1 Innate and adaptive immune adaptations with moderate and heavy drinking 2 Transcriptional and epigenetic mechanisms of alcohol associated immune dysfunction 3 Alcohol microbiome cross talk and its role on

immune function 4 Alcohol and tissue immunity impact on barrier function immune stromal cell crosstalk 5 Alcohol and immune responses to vaccines and infections 6 Impact of alcohol on immune metabolism and mitochondrial dysfunction 7 Sex differences in the impact of heavy drinking on immune responses 8 Organ organ interactions and immunity o Gut Lung Liver axis o Gut brain axis o Liver brain axis

**New Approach Methods in Immunology** Jeffrey John Bajramovic, Susan Gibbs, Emanuela Corsini, Thomas Hartung, 2024-09-27 Currently the assessment of functional immunological relevance is mainly done in animal models Motivation to work on non animal methods or new approach methods NAM stems from economical and ethical considerations and is supported by public

pressure. Importantly, the translational gap between results obtained in animal studies and clinical trials in humans, the valley of death combined with the reproducibility crisis in science, also provide strong scientific arguments to work on novel, robust, human-based methodology. The field of immunology confronts NAM scientists with specific challenges. Firstly, immunological responses require several cell types in different locations for proper development and take considerable time to develop. Secondly, immunological responses in outbred humans are characterized by genetic and functional variability. Still, the development and application of NAM are increasing rapidly, and the field is moving at such a fast pace that a special issue is timely. Our goal is to provide an overview of the current state of the art regarding new approach methods or non-animal methods in immunology. These should be inspired by the desire to mimic in vivo biology and describe e.g. challenges in mimicking immunological structures like lymph nodes, bone marrow, local immune structures, immunological responses, systemic and local innate and adaptive B cells and T cells, and/or immunological processes like maturation, trafficking, extravasation, immunotoxicity, affinity maturation.
