## **Health And Global Environment:**

**Global Environmental Change: The Threat to Human Health** Samuel S. Myers, 2009-11 Over the past two to three hundred years humanity's ecological footprint has ballooned to such an extent that we are now fundamentally altering the planet. We have transformed the Earth's land surface and altered the function of its ecosystems and we are triggering the rapid loss of both terrestrial and marine life. We are also profoundly changing our planet's climate. It is increasingly apparent that the breadth and depth of the changes we are wreaking on the environment are imperiling not only many of the other species with which we share the ecological stage but the health and wellbeing of our own species as well. Global climate change threatens human health in numerous and profound ways. Large segments of the population will experience more heat waves, altered exposure to infectious disease and more frequent natural disasters. Most significantly, climatic disruption threatens the adequacy of the core building blocks of health for large populations around the globe: sufficient food and nutrition, safe water for drinking and sanitation, fresh air to breathe and secure homes to live in. As climate change dismantles these central elements of healthy societies, people with fewer resources will be forced to migrate in large numbers to lands where they may not be welcome. A likely result of all of these processes will be increased civic instability and strife. **Our Global Environment** Anne Nadakavukaren, Jack Caravanos, 2020-01-23 Our Global Environment, regarded for decades as the quintessential introduction to environmental health for its authoritative coverage and cogent prose, provides a richly detailed survey of current environmental issues. In compelling language, Anne Nadakavukaren and new coauthor Jack Caravanos describe the crucial interdependence between humans and their environment, exploring the varied ways in which human activities have impacted, degraded or altered the environment and the consequences to both natural ecosystems and human health and wellbeing. The eighth edition features a new chapter on climate change and the public health impacts of global warming, incorporating the latest assessments of the Intergovernmental Panel on Climate Change with regard to the physical science basis, mitigation efforts and adaptation strategies. Extensive revisions and updates throughout the volume reflect current topics of concern, including the magnitude of global hunger and malnutrition, outbreaks of the Zika virus, vaping and the incidence of serious lung injury, MTBE contamination of groundwater, recycling of lead acid batteries in developing countries, mercury exposure among artisanal gold miners and lead-contaminated drinking water in Flint, Michigan and other communities. Readers will appreciate the addition of 16 pages of color images as well as the authors' emphasis on opportunities for public participation in the decision-making processes that profoundly influence health and environmental quality. *Study Guide to Our Global Environment* Anne Nadakavukaren, Jack Caravanos, 2020-01-31 The perfect companion volume to *Our Global Environment: A Health Perspective*, Eighth Edition, this Study Guide is designed with the student in mind. The exercises are presented in a variety of formats, including true/false, matching, short answer, discussion and essay, providing students with the tools they need to review the material and reinforce their understanding of the topics in each chapter. The

convenient format and perforated pages give instructors multiple options exercises can be assigned and collected as homework incorporated into classroom discussions and activities or used by students to prepare for exams In addition the Study Guide contains specific activities that send students into their communities to seek information on local environmental concerns giving them a real sense of how such issues directly impact their own lives Moreover these activities encourage and prepare students to become informed participants in the public decision making processes that will profoundly influence environmental quality and health in the years to come *OUR GLOBAL ENVIRONMENT* ANNE. Matthew,Jon Barnett,Bryan McDonald,Karen L. O'Brien,2009-10-09 Experts discuss the risks global environmental change poses for the human security including disaster and disease violence and increasing inequity In recent years scholars in international relations and other fields have begun to conceive of security more broadly moving away from a state centered concept of national security toward the idea of human security which emphasizes the individual and human well being Viewing global environmental change through the lens of human security connects such problems as melting ice caps and carbon emissions to poverty vulnerability equity and conflict This book examines the complex social health and economic consequences of environmental change across the globe In chapters that are both academically rigorous and policy relevant the book discusses the connections of global environmental change to urban poverty natural disasters with a case study of Hurricane Katrina violent conflict with a study of the decade long Nepalese civil war population gender and development The book makes clear the inadequacy of traditional understandings of security and shows how global environmental change is raising new unavoidable questions of human insecurity conflict cooperation and sustainable development Contributors W Neil Adger
