Halverson, Jr., Gedolph A. Kohnstamm, Roy P. Martin, Charles F. Halverson, Geldolph A. Kohnstamm, 2014-05-12 This book is the first to bring together researchers in individual differences in personality and temperament to explore whether there is any unity possible between the temperament researchers of infancy and childhood and the major researchers in adult personality Prior to the workshop which resulted in this volume the existing literature seemed to document a growing consensus on the part of the adult personality researchers that five major personality dimensions the Big Five might be sufficient to account for most of the important variances in adult individual differences in personality In contrast to this accord the literature on child and infant individual differences seemed to offer a wide variety of opinions regarding the basic dimensions of difference in personality or temperament The editors believed that they could encourage researchers from both the adult and child areas to consider the importance of a lifespan conceptualization of individual differences by discussing their research in terms of a continuity approach Written by some of the most distinguished scholars from Great Britain continental Western Europe and Eastern Europe as well as the United States and Canada the chapters present a cross cultural view of both adult personality and temperament in infancy and childhood By sharing their recent data techniques and theoretical speculations the chapter authors communicate the research enthusiasm engendered by the growing consensus of the adult Big Five as well as the exciting prospects of an integrative program of research from infancy to adulthood that will clarify and consolidate what is now a disparate set of methods theory and findings across the lifespan The editors suggest that this volume will have considerable heuristic value in stimulating researchers to conceptualize their work in developmental lifespan approaches that will lead to a consolidation of individual differences research at every age *Normal Human Aging* Gerontology Research Center (U.S.), 1984 **Advances in Personality Assessment** J. N. Butcher, Charles D. Spielberger, 2013-10-31 The primary goal of this series is to disseminate information about major new research or applied developments in the field of personality assessment We are striving to present a broad range of topics in personality assessment that reflect the diverse

viewpoints and various assessment strategies that make up the field The series is devoted to several types of contributions relevant reviews of research areas and theoretical articles empirical research studies intensive case studies and articles describing new well developed assessment techniques This volume differs somewhat from the previous three volumes in the series which generally contained chapters with heterogeneous content Several of the articles in Volume 4 focus on a single theme international applications of personality assessment Specifically it contains several invited articles which detail some of the extensive international work being conducted on the Minnesota Multiphasic Personality Inventory Advanced Personality David F. Barone, Michel Hersen, Vincent B. Van Hasselt, 1998-05-31 Embracing all aspects of personality study Advanced Personality addresses major established theories and vital current research topics in the field from the perspectives of both clinical and scholarly settings This impressive text reference features chapters that cover among other topics psychobiological theories of personality conscious and unconscious functioning and personality disorders from a trait perspective Written for entry level graduate and upper level undergraduate students the book includes an introductory chapter with a chronological table listing all major figures in the history of the field and tables that summarize key aspects of various theories The Five-Factor Model of Personality Across Cultures Robert R. McCrae, Juri Allik, 2012-12-06 ROBERT R MCCRAE it is simply personality research conducted in different countries The implicit assumption behind this practice is that personality processes are universal and where they are studied is thus of no consequence An insensitivity to cultural context once imputed mostly to Americans now appears to characterize the field worldwide Fortunately recent years have also seen a rise of interest in studies of personality and culture Church 2001 Church Lee McCauley McCrae 2000 What do these new studies show Are personality processes indeed universal or are there significant variations across cultures that necessitate a more nuanced approach to research There is as yet no definitive answer to that question In some respects human personality does seem to transcend the boundaries of language and culture in other respects it is profoundly influenced by social and historical forces Sorting these issues out must be a priority for our field if we are to understand the current personality literature **Temperament** Jan Strelau, 2005-12-21 Temperament is the first monograph in 40 years to present theories and basic findings in the field of temperament from a broad international and interdisciplinary perspective The text based on the author's four decades of personal study and data collection thoroughly explores the physiological biochemical and genetic bases of temperament incorporating age specific methods of assessment developed through child and adult oriented approaches The 147 illustrations comprise tables of the most popular temperament inventories for both children and adults and unique data tables illustrating the psychometric features of temperament inventories based on self rating and rating by others Explorations in Temperament Jan Strelau, Alois Angleitner, 2013-11-11 The growing interest in research on temperament during the last decade has been recorded by several authors e g R Plomin J E Bates from such sources of information as the Social Sciences Citation Index or Psychological Abstracts The editors inquiry shows that the

number of cases in which the term temperament was used in the title of a paper or in the paper's abstract published in Psychological Abstracts reveals an essential increase in research on temperament. During the years 1975 to 1979 the term temperament was used in the title and or summary of 173 abstracts i.e. 34.6 publications per year. During the next five years 1980-1984 it was used in 367 abstracts 73.4 publications per year whereas in the last five years 1985 to 1989 the term has appeared in 463 abstracts that is in 92.6 publications per year. Even if the review of temperament literature is restricted to those abstracts it can easily be concluded that temperament is used in different contexts and with different meanings hardly allowing any comparisons or general statements. One of the consequences of this state of affairs is that our knowledge on temperament does not cumulate despite the increasing research activity in this field. This situation in temperament research motivated the editors to organize a one week workshop on The Diagnosis of Temperament Bielefeld Federal Republic of Germany September 1987.

The book provides an exhaustive overview of the theoretical issues and existing research related to personality emphasizing the two traits under investigation openness and ambiguity tolerance which are the focus of the empirical study reported later in the book. The empirical investigation explored relationships between openness to experience and ambiguity tolerance as well as their impact on attainment in learning English as a foreign language. Moreover it also aimed to shed light on the link between these traits and students' assessments i.e. self assessment and school grades.
