Lalitha Krishnamurthy, Arockia Rajasekar, **Trains and Technology** Anthony J. Bianculli,2001 This work presents a view  
of the history of American railroads in the nineteenth century from a somewhat different perspective The maturation of the  
railroad is traced through an exposition of the railroad technology that was developed and applied during the period  
Throughout the nineteenth century a symbiotic relationship existed between railroading and technology each dependent  
upon the state and progress of the other to a large degree A great deal of new technology was created for the railroad and  
the railroad in turn applied new technology as it became available Volume four is about bridges and tunnels and signals An  
exposition of the various types of bridges their foundations and the materials of which they were made is included Tunnels  
and marine railroad operations are treated also The development of signal systems is an area that has been overlooked or  
neglected in the general literature but is fully covered here The text of this volume is accompanied by 145 illustrations and
