Gunn Effect Logic Devices:

Gunn-effect Logic Devices Hans Hartnagel, 1973 **Gunn Effect Pulse and Logic Devices** Seid Hossein Izadpanah, 1969 GaAs Devices and Circuits Michael S. Shur, 2013-11-21 GaAs devices and integrated circuits have emerged as leading contenders for ultra high speed applications This book is intended to be a reference for a rapidly growing GaAs community of researchers and graduate students It was written over several years and parts of it were used for courses on GaAs devices and integrated circuits and on heterojunction GaAs devices developed and taught at the University of Minnesota Many people helped me in writing this book I would like to express my deep gratitude to Professor Lester Eastman of Cornell University whose ideas and thoughts inspired me and helped to determine the direction of my research work for many years I also benefited from numerous discussions with his students and associates and from the very atmosphere of the pursuit of excellence which exists in his group I would like to thank my former and present co workers and colleagues Drs Levinstein and Gelmont of the A F Ioffe Institute of Physics and Technology Professor Melvin Shaw of Wayne State University Dr Kastalsky of Bell Communications Professor Gary Robinson of Colorado State University Professor Tony Valois and Dr Tim Drummond of Sandia Labs for their contributions to our joint research and for valuable discussions My special thanks to Professor Morko for his help his ideas and the example set by his pioneering work Since 1978 I have been working with engineers from Honeywell Inc Drs **Semiconductor Devices and Integrated Electronics** A. G. Milnes, 2012-12-06 For some time there has been a need for a semiconductor device book that carries diode and transistor theory beyond an introductory level and yet has space to touch on a wider range of semiconductor device principles and applications Such topics are covered in specialized monographs numbering many hundreds but the voluminous nature of this literature limits access for students This book is the outcome of attempts to develop a broad course on devices and integrated electronics for university students at about senior year level The educational prerequisites are an introductory course in semiconductor junction and transistor concepts and a course on analog and digital circuits that has introduced the concepts of rectification amplification oscillators modulation and logic and Switching circuits The book should also be of value to professional engineers and physicists because of both the information included and the detailed guide to the literature given by the references The aim has been to bring some measure of order into the subject area examined and to provide a basic structure from which teachers may develop themes that are of most interest to students and themselves Semiconductor devices and integrated circuits are reviewed and fundamental factors that control power levels frequency speed size and cost are discussed The text also briefly mentions how devices are used and presents circuits and comments on representative applications Thus the book seeks a balance between the extremes of device physics and circuit design

Microelectronics, II. , 1983 III-V Semiconductor Materials and Devices R.J. Malik, 2012-12-02 The main emphasis of this volume is on III V semiconductor epitaxial and bulk crystal growth techniques Chapters are also included on material

characterization and ion implantation In order to put these growth techniques into perspective a thorough review of the physics and technology of III V devices is presented This is the first book of its kind to discuss the theory of the various crystal growth techniques in relation to their advantages and limitations for use in III V semiconductor devices *GaAs Microelectronics* Norman G. Einspruch, William R. Wisseman, 2014-12-01 VLSI Electronics Microstructure Science Volume 11

GaAs Microelectronics presents the important aspects of GaAs Gallium Arsenide IC technology development ranging from materials preparation and IC fabrication to wafer evaluation and chip packaging The volume is comprised of eleven chapters Chapter 1 traces the historical development of GaAs technology for high speed and high frequency applications This chapter summarizes the important properties of GaAs that serve to make this material and its related compounds technologically important Chapter 2 covers GaAs substrate growth ion implantation and annealing and materials characterization technologies that are essential for IC development Chapters 3 6 describe the various IC technologies that are currently under development These include microwave and digital MESFET ICs the most mature technologies and bipolar and field effect heterostructure transistor ICs The high speed capability of GaAs ICs introduces new problems on wafer testing and packaging These topics are discussed in Chapters 7 and 8 Applications for GaAs ICs are covered in Chapters 9 and 10 The first of these chapters is concerned with high speed computer applications the second addresses military applications The book concludes with a chapter on radiation effects in GaAs ICs Scientists engineers researchers device designers and systems architects will find the book useful Compound and Josephson High-Speed Devices Takahiko Misugi, Akihiro Shibatomi, 2013-06-29 In recent years III V devices integrated circuits and superconducting integrated circuits have emerged as leading contenders for high frequency and ultrahigh speed applications GaAs MESFETs have been applied in microwave systems as low noise and high power amplifiers since the early 1970s replacing silicon devices The heterojunction high electron mobility transistor HEMT invented in 1980 has become a key component for satellite broadcasting receiver systems serving as the ultra low noise device at 12 GHz Furthermore the heterojunction bipolar transistor HBT has been considered as having the highest switching speed and cutoff frequency in the semiconductor device field Initially most of these devices were used for analog high frequency applications but there is also a strong need to develop high speed III V digital devices for computer telecom munication and instrumentation systems to replace silicon high speed devices because of the switching speed and power dissipation limitations of silicon The potential high speed and low power dissipation of digital integrated circuits using GaAs MESFET HEMT HBT and superconducting Josephson junction devices has evoked tremendous competition in the race to develop such technology A technology review shows that Japanese research institutes and companies have taken the lead in the development of these devices and some integrated circuits have already been applied to supercomputers in Japan The activities of Japanese research institutes and companies in the III V and superconducting device fields have been superior for three reasons First bulk crystal growth epitaxial growth process and design technology
