**T**he Manhattan Project—the secret effort to invent and build the first atomic bomb—was accomplished in less than 4 years at a cost of approximately \$2 billion.<sup>1</sup> The project was backed by the resources of America's largest and most advanced corporations and engineering firms, and employed the talents of thousands of the world's best scientists, technicians, and workers.

A half century later, the institutional descendant of the Manhattan Project, the U.S. Department of Energy (DOE), confronts a new mission: cleaning up the environmental pollution left by cold war nuclear weapons production. This new mission presents DOE with daunting technical and organizational challenges as it strives to revise policies that led to widespread pollution throughout the Nuclear Weapons Complex and to restore contaminated environments to safe conditions.

It is estimated that cleanup of environmental contamination from nearly 50 years of nuclear weapons manufacture will cost more than \$100 billion and require more than 30 years to complete. The cost and length of the cleanup are uncertain because the true extent of pollution and the means to remedy it areas yet only dimly understood. Some areas of the Weapons Complex may never be restored to pristine conditions.<sup>2</sup>

The tasks involved in the cleanup of environmental contamination are unfamiliar to DOE. Indeed, the entire field of hazardous waste management and environmental remediation is in its infancy. Methods of characterizing contaminated sites are highly uncertain,<sup>3</sup> and approaches to cleaning up are largely unproved at both waste sites owned by private industry and government-owned facilities such as DOE reservations.<sup>4</sup>

It is clear, however, that cleaning up the 14 facilities in 13 States that make up the Nuclear Weapons Complex (NWC) will
