Fuzzy Logic-Based Algorithms for Video De-Interlacing Piedad Brox, Iluminada Baturone Castillo, Santiago Sánchez Solano, 2010-01-27 The Fuzzy Logic research group of the Microelectronics Institute of Seville is composed of researchers who have been doing research on fuzzy logic since the beginning of the 1990s Mainly this research has been focused on the microelectronic design of fuzzy logic based systems using implementation techniques which range from ASICs to FPGAs and DSPs Another active line was the development of a CAD environment named Xfuzzy to ease such design Several versions of Xfuzzy have been and are being currently developed by the group The addressed applications had basically belonged to the control field domain In this sense several problems without a linear control solution had been studied thoroughly Some examples are the navigation control of an autonomous mobile robot and the level control of a dosage system The research group tackles a new activity with the work developed in this book the application of fuzzy logic to video and image processing We addressed our interest to problems related to pixel interpolation with the aim of adapting such interpolation to the local features of the images Our hypothesis was that measures and decisions to solve image interpolation which traditionally had been done in a crisp way could better be done in a fuzzy way Validation of this general hypothesis has been done specially in the interpolation problem of video de interlacing interlacing is one of the main tasks in video processing
