Evidence-biased Antidepressant Prescription Michael P. Hengartner, 2021-12-09 This book addresses the over prescribing of antidepressants in people with mostly mild and subthreshold depression It outlines the steep increase in antidepressant prescription and critically examines the current scientific evidence on the efficacy and safety of antidepressants in depression The book is not only concerned with the conflicting views as to whether antidepressants are useful or ineffective in various forms of depression but also aims at detailing how flaws in the conduct and reporting of antidepressant trials have led to an overestimation of benefits and underestimation of harms The transformation of the diagnostic concept of depression from a rare but serious disorder to an over inclusive highly prevalent but predominantly mild and self limiting disorder is central to the book's argument It maintains that biological reductionism in psychiatry and pharmaceutical marketing reframed depression as a brain disorder corroborating the overemphasis on drug treatment in both research and practice Finally the author goes on to explore how pharmaceutical companies have distorted the scientific literature on the efficacy and safety of antidepressants and how patient advocacy groups leading academics and medical organisations with pervasive financial ties to the industry helped to promote systematically biased benefit harm evaluations affecting public attitudes towards antidepressants as well as medical education training and practice

Aspects of Homogeneous Catalysis R. Ugo,2012-12-06 1 INTRODUCTION Although quite spectacular results have been obtained in the last few decades in the field of homogeneous transition metal catalyzed transformations of olefins and alkynes 1 reactions which could lead to heterocycles have been partly neglected An obvious

reason for this is that substrates containing heteroatoms such as N or S could coordinate the metal and suppress the catalytic activity. Nevertheless, some interesting early examples of transition metal catalyzed syntheses of heterocyclic compounds have been reported and these have been reviewed by C. W. Bird.² More recently, the incorporation of CO which enables esters and lactones to be synthesized from olefinic starting materials has begun to attract attention; see, for example, ref. 3. The dominant role of palladium as the catalyst for the formation of O-containing heterocycles has been suggested to be associated with the relatively low strength of the Pd-O bond. Among the first examples of a nitrogen-containing heterocycle to be formed by homogeneous catalysis is the triazine shown in Equation 1, which is the product of the trimerization of benzonitrile in the presence of iron pentacarbonyl or Raney nickel.⁴

Wheel Fever Jesse J. Gant, Nicholas J. Hoffman, 2013-09-27 On rails to trails, bike paths, city streets, and winding country roads, the bicycle seems ubiquitous in the Badger State. Yet there is a complex and fascinating history behind the popularity of biking in Wisconsin, one that until now has never been told. Meticulously researched through periodicals and newspapers, *Wheel Fever* traces the story of Wisconsin's first bicycling boom from the velocipede craze of 1869 through the wheel fever of the 1890s. It was during this crucial period that the sport Wisconsinites know and adore first took shape. From the start, it has been defined by a rich and often impassioned debate over who should be allowed to ride, where they could ride, and even what they could wear. Many early riders embraced the bicycle as a solution to the age-old problem of how to get from here to there in the quickest and easiest way possible. Yet for every supporter of the poor man's horse, there were others who wanted to keep the rights and privileges of riding to an elite set. Women, the working class, and people of color were often left behind as middle and upper class white men benefitted from the masculine sport. And all male clubs and racing events began to shape the scene. Even as bikes became more affordable and accessible, a culture defined by inequality helped create bicycling in its own image, and these limitations continue to haunt the sport today. *Wheel Fever* is about the origins of bicycling in Wisconsin and why those origins still matter, but it is also about our continuing fascination with all things bicycle. From boneshakers to high wheels, standard models to racing bikes, tandems to tricycles, the book is lushly illustrated with never-before-seen images of early cycling and the people who rode them: bloomer girls, bicycle jockeys, young urbanites, and unionized workers. Laying the foundations for a much-beloved recreation, *Wheel Fever* challenges us to imagine anew the democratic possibilities that animated cycling's early debates.

Better Doctors, Better Patients, Better Decisions Gerd Gigerenzer, J.A. Muir Gray, 2013-01-11

How eliminating risk illiteracy among doctors and patients will lead to better health care decision making Contrary to popular opinion one of the main problems in providing uniformly excellent health care is not lack of money but lack of knowledge on the part of both doctors and patients The studies in this book show that many doctors and most patients do not understand the available medical evidence Both patients and doctors are risk illiterate frequently unable to tell the difference between actual risk and relative risk Further unwarranted disparity in treatment decisions is the rule rather than the exception in the United States and Europe All of this contributes to much wasted spending in health care The contributors to Better Doctors Better Patients Better Decisions investigate the roots of the problem from the emphasis in medical research on technology and blockbuster drugs to the lack of education for both doctors and patients They call for a new more enlightened health care with better medical education journals that report study outcomes completely and transparently and patients in control of their personal medical records not afraid of statistics but able to use them to make informed decisions about their treatments
