Ellis,Anne-Lise Christensen,2012-12-06 DAVID W ELLIS AND ANNE LISE CHRISTENSEN 1 A BRIEF OVERVIEW In the past most people who sustained catastrophic brain injury died However over the past several decades sophisticated medical diagnostic techniques such as computerized tomography CT and magnetic resonance imaging MRI along with advances in emergency trauma procedures and neurosurgical procedures e g intracranial pressure monitoring have dramatically increased the survival rates for people who have survived such trauma At the same time because of population growth the number of victims of brain trauma primarily automobile accidents has also risen 1 As a result of their injuries many of these people have developed severe disabilities that affect their lives and the lives of everyone around them For those who survive and their families mere survival is not enough Attention must be paid to the quality of their lives after the traumatic event During the past 15 years there has been an increasing focus on the development of treatment techniques for brain injuries Although the principal focus of this text is on the neuropsychological i e neurological and psychological aspects of treatment both theory and technique the book is also directed towards the broad variety of issues that affect survivors their families health care professionals and the social milieu **The TBI Annual Research Index** Arokiasamy,1990-01-01 With survival rates increasing for persons sustaining head injuries and the number of TBI programs exceeding 1000 nationwide the need for access to information is more important than ever This publication presents a compendium of bibliographic information available worldwide on head injury through 1990 The TBI Annual

Research Index is divided into three major sections Post Acute Acute and Books Bibliographies Presents in 33 chapters information is compiled from worldwide sources e g print computerized data bases and publishers and more than 1 500 entries on traumatic brain injury are included **The Neuropsychology Handbook** Arthur MacNeill Horton, Danny Wedding, 2008 Print CourseSmart **Sexual and Reproductive Neurorehabilitation** Mindy L. Aisen, 2013-03-09 This well written text thoroughly addresses two quality of life issues in patients with a variety of neurological disorders sexual and reproductive function The de vasta stating effects of a variety of neurological diseases are well known to both the lay and medical communitles and are treated in numerous texts However as we continue to experience therapeutic breakthroughs in the tielts of neurology and rehabilitation medicine physicians and patients must become more aware of the issues discussed in this text It is particularly important as emphasized throughout the chapters that the physician or therapist initiate conversations with the patients concerning both the possibility of parenting a child as well as the ability of the patient to enhance his her sexual functioning Commonly in the patient who is otherwise perfectly normal there is a reluctance to discuss these topics and couples often feel embarrassed to initiate a conversation with their physi cians This reluctance to initiate a discussion is even more apparent in patients with a variety of neurological disorders in which there are overriding fears concerning both function and survival as well as deep concerns about their own attractiveness and their sexual and repro ductive ability
