Otero, Summer L. Kaplan, L. Santiago Medina, C. Craig Blackmore, Kimberly E. Applegate, 2024-08-31 This book provides evidence based guidance for pediatric imaging to radiologists pediatricians and all subspecialists caring for children as well as policy advocates While the majority of pediatric radiology books concentrate on diagnosis this book highlights how imaging should be used in optimal care allowing comparisons between different modalities and addressing follow up complications and the issue of timing of imaging The primary objective of this book is to provide a summary of appropriate imaging use in terms of modality and timing based on the best available evidence The book therefore acts as a resource for optimized clinical care of children and effective decision making A secondary objective is to collate the evidence based practices that constitute quality care for children in the setting of value based imaging

Radiologists are often in the position of helping clinicians decide when and how to image children with suspected diseases or confirmed diagnoses. However, traditional residency training has done little to fulfill the need for this up-to-date evidence knowledge. Moreover, in spite of furthering subspecialization of the field, the great majority of children's imaging and care occur outside of children's hospitals where clinicians and radiologists might need this type of general guidance for establishing best practices. The book is divided in two parts: non-diagnostic considerations such as evidence-based imaging safety, value, and the practice of radiology in low resource settings; and a second, larger clinical component divided in prenatal, oncology, neurological, musculoskeletal, cardiothoracic, and abdominal imaging. This new edition incorporates changes in practice and guidelines in the decade since the first edition was written, with many new chapters in emerging topics including prenatal oncology and neurological imaging. This is an ideal guide for radiologists, pediatricians, policy advocates, and all healthcare professionals caring for children.

Headache and Migraine in Practice Mansoureh Togha, Elham Jafari, Hossein Ansari, Samaneh Haghighi, Seyed Ehsan Mohammadianinejad, 2022-05-19. *Headache and Migraine in Practice* provides practical and precise approaches to the headaches and facial pains commonly encountered in hospitals and clinics. The book pays specific attention to the clinical features of headaches to present treatment solutions while also recommending ICHD3 differential diagnoses based on diagnostic criteria. Topics covered were developed by colleagues with expertise in Neurology, Nutrition, Psychiatry, Physical Medicine, and Sports Medicine, thus providing a collaborative authorship that adds interdisciplinary value. Sections cover the diagnosis and treatment of various types of headaches in children, the elderly, and women during different periods of pregnancy, lactation, and hormone-related stages. This book is recommended for general practitioners, internists, neurologists, headache nurse specialists, and all others who would like to contribute to better diagnoses and more effective treatment plans for patients with headaches and facial pains. Provides practical guidance on the diagnosis and treatment of different primary and secondary headaches. Includes classifications of headaches according to the latest international headache standards. Covers a variety of migraine and headache types as well as disorders affecting cervical structures and cranial nerves.

This edition includes new chapters on dealing with difficult child behavior in the office, alternative therapy for autism spectrum disorders, treatment of autism spectrum disorders, oppositional defiant disorder, bilingualism, health literacy, incarcerated parents, and military parents. Recommended readings for physicians and parents are included. A companion website includes the fully searchable text.

The Handbook of Chronic Pain, 2007. The objective of this book is to promote and enable closer co

operation between different health professionals in treating pain by introducing psychosocially oriented team members to the medical aspects of pain and medically oriented team members to the psychosocial aspects. The structure of the book completely mirrors this objective. The book has nine parts arranged according to a balanced plan. Parts I and II deal with theoretical basic science approaches to pain whereby Part I focuses on the medical approaches and Part II on the psychosocial ones. Part III is devoted to pain evaluation and assessment whereby chapter 9 deals with the medical aspects, chapter 10 with the psychophysiological and psychiatric aspects and chapter 11 with the psychological psychometric approach describing different commonly used questionnaires for assessing various aspects of pain. Parts IV to Part VII are devoted to treatment of pain. Part IV focuses on medical treatments, Part V on psychological treatments, Part VI on palliative approaches and Part VII on complementary approaches mainly those supported by enough research and evidence. Part VIII focuses on particular pain syndromes those that are most frequent in the practice of pain emphasising both medical and psychological aspects in each chapter. Finally Part IX deals with the practice of treating pain in chapter 29 with the facilities and pain centres namely the locations where the integration of the described approaches to pain is expected to take place and in chapter 30 with the problems of the health professional that treats pain.
