Intelligent Construction in Tunnels Limao Zhang, Yue Pan, Penghui Lin, Mirosław J. Skibniewski, 2025-08-02 This book highlights the latest technologies and applications of intelligent construction in the domain of tunneling works Rapid urbanization has surged the rapid development of underground infrastructures in major metropolises around the world over the past decades The development of urban tunnel systems is a challenging task with high complexity in terms of design construction and maintenance Recent advancements in information and communication technologies ICTs have driven vast transformations around the world with successful implementations in many domains of science Under the concept of industry 4.0 there are many attempts at intelligent construction using the latest ICTs where the major applications in urban system development mainly focus on building information modelling BIM Internet of Things IoT deep learning and computer vision A tremendous transformation has taken place in the past years with the emerging intelligent construction applications in urban tunnel development This enables industrial participants to operate projects more efficiently and safely not only increasing the automation and productivity in tunnel development but also enhancing construction competitiveness globally

Stochastic Transport in Complex Systems Andreas Schadschneider, Debashish Chowdhury, Katsuhiko Nishinari, 2010-10-01 The first part of the book provides a pedagogical introduction to the physics of complex systems driven far from equilibrium In this part we discuss the basic concepts and theoretical techniques which are commonly used to study classical stochastic transport in systems of interacting driven particles The analytical techniques include mean field theories matrix product ansatz renormalization group etc and the numerical methods are mostly based on computer simulations In the second part of the book these concepts and techniques are applied not only to vehicular traffic but also to transport and traffic like phenomena in living systems ranging from collective movements of social insects for example ants on trails to intracellular molecular motor transport These demonstrate the conceptual unity of the fundamental principles underlying the apparent diversity of the systems and the utility of the theoretical toolbox of non equilibrium statistical mechanics in interdisciplinary research far beyond the traditional disciplinary boundaries of physics Leading industry experts provide a broad overview of the interdisciplinary nature of physics Presents unified descriptions of intracellular ant and vehicular traffic from a physics point of view Applies theoretical methods in practical everyday situations Reference and guide for physicists engineers and graduate students
