qualities to humans and other animals Western culture has obliterated most people's capacity to perceive these messages but this book also contains valuable information on how we can restore our faculties of perception The book will affect readers on rational and emotional planes It is grounded in both a New Age spiritual sensibility and hard science While some of the author's claims may strike traditional thinkers as outlandish Buhner presents his arguments with such authority and documentation that the scientific underpinnings however unconventional are completely credible The overall impact is a powerful eye opening expos of the threat that our allopathic Western medical system in combination with our unquestioning faith in science and technology poses to the primary life support systems of the planet At a time when we are preoccupied with the terrorist attacks and the possibility of biological warfare perhaps it is time to listen to the planet This book is essential reading for anyone concerned about the state of the environment the state of health care and our cultural sanity

Anthropocene Religion Michael Barnes Norton, 2025-02-28 Anthropocene Religion argues that addressing a future and present shaped by worldwide catastrophic climate change involves not only radically rethinking the ideas of nature and humanity's place within it inherited from Western modernity It also demands a reconceptualization of the nature and role of religion The advent of the Anthropocene simultaneously displaces the human from the centre of the world and erodes all sharp distinctions between the natural environment and the realm of human activity Similarly the Anthropocene renders untenable concepts of religion that rely on reference to realms beings or forces that wholly transcend nature It is however possible to understand both religion and its divine referents in worldly rather than transcendent terms just as it is possible to understand nature as dynamic and creative The Gaia hypothesis offers us a figure through which to approach these concepts in their interconnectedness

Global Emergency Actions Alan Wittbecker, 2007-02-27 The Environment and Science Christian C. Young, 2005-04-25 A fascinating look at the historical relationship between environmental issues and scientific study social attitudes and public policy from the 17th century to the present The Environment and Science Social Impact and Interaction explores the history of how science investigates nature and how those studies both shape and are shaped by the social attitudes philosophies and politics of their times It follows the changes in perceptions of the natural world and humankind's place in it from the European colonization of North America through the Industrial Revolution and westward expansion to the rise of the consumer economy and the recent hardening of the ideological battle lines over environmental policy Coverage includes the emergence of ecology as a science and conservation as a movement the long history of conflicts between business interests and environmentalists and the role of scientific studies in debates over atomic and nuclear power pesticides toxic emissions and other human made sources of environmental degradation

Soukhovolsky, 2018-11-06 Written and edited by some of the most well respected authors in the area of the adaptation of plants and animals to climate change this groundbreaking new work is an extremely important scientific contribution to the study of global warming Global climate change is one of the most serious and

Green Psychology

Ralph Metzner, 1999-06-01 A visionary ecopsychologist examines the rift between human beings and nature and shows what can be done to bring harmony to both the ecosystem and our own minds Shows that the solution to our ecological dilemma lies in our own consciousnesses It is becoming more and more apparent that the causes and cures for the current ecological crisis are to be found in the hearts and minds of human beings For millennia we existed within a religious and psychological framework that honored the Earth as a partner and worked to maintain a balance with nature But somehow a root pathology took hold in Western civilization the idea of domination over nature and this led to an alienation of the human spirit that has allowed an unprecedented destruction of the very systems which support that spirit In Green Psychology Ralph Metzner explores the history of this global pathology and examines the ways that we can restore a healing relationship with nature His search for role models takes him from shamanic ceremonies with the Lacandon Maya of Mexico to vision quests in the California desert from the astonishing nature mysticism of Hildegard von Bingen to the Black Goddesses and Green Gods of our pagan ancestors He examines the historical roots of the split between humans and nature showing how first sky god worshipping cultures then monotheisms and finally mechanistic science continued to isolate the human psyche from the life giving Earth His final chapters present a solution showing that disciplines such as deep ecology and ecofeminism are creating a worldview in which the mind of humanity and the health of the Earth are harmoniously intertwined

Mathematics for the Environment Martin Walter, 2011-01-18 Mathematics for the Environment shows how to employ simple mathematical tools such as arithmetic to uncover fundamental conflicts between the logic of human civilization and the logic of Nature These tools can then be used to understand and effectively deal with economic environmental and social issues With elementary mathematics the book se

Ecological Ethics Patrick Curry, 2011-07-12 In this thoroughly revised

and updated second edition of the highly successful Ecological Ethics Patrick Curry shows that a new and truly ecological ethic is both possible and urgently needed With this distinctive proposition in mind Curry introduces and discusses all the major concepts needed to understand the full range of ecological ethics He discusses light green or anthropocentric ethics with the examples of stewardship lifeboat ethics and social ecology the mid green or intermediate ethics of animal liberation rights and dark or deep green ecocentric ethics Particular attention is given to the Land Ethic the Gaia Hypothesis and Deep Ecology and its offshoots Deep Green Theory Left Biocentrism and the Earth Manifesto Ecofeminism is also considered and attention is paid to the close relationship between ecocentrism and virtue ethics Other chapters discuss green ethics as post secular moral pluralism and pragmatism green citizenship and human population in the light of ecological ethics In this new edition all these have been updated and joined by discussions of climate change sustainable economies education and food from an ecocentric perspective This comprehensive and wide ranging textbook offers a radical but critical introduction to the subject which puts ecocentrism and the critique of anthropocentrism back at the top of the ethical intellectual and political agenda It will be of great interest to students and activists and to a wider public [The Mechanism Demands a Mysticism](#)

Living with the Adirondack Forest Catherine Henshaw Knott, 2018-09-05 Attitudes about land use Catherine Henshaw Knott suggests may reflect profound differences in class religion and life experience pitting urban Americans who see nature at risk against rural Americans whose lives are dominated by nature's forces She documents the thoughts and feelings of people whose lives are intimately connected to the forest including loggers trappers craftspeople and guides as well as tree farmers and maple syrup producers After describing the key players in the conflict and chronicling battles and bridge building between stake holders Knott concludes that the participation of local people in decision making is the only process that can shift an increasingly hostile cycle toward resolution
