Bad Education Lee Edelman, 2022-12-05 Long awaited after *No Future* and making queer theory controversial again Lee Edelman's *Bad Education* proposes a queerness without positive identity a queerness understood as a figural name for the void itself unnamable around which the social order takes shape Like Blackness woman incest and sex queerness as Edelman explains it designates the antagonism the structuring negativity preventing that order from achieving coherence But when certain types of persons get read as literalizing queerness the negation of their negativity can seem to resolve the social antagonism and totalize community By translating the nothing of queerness into the something of the queer the order of meaning defends against the senselessness that undoes it thus mirroring Edelman argues education's response to queerness its sublimation of irony into the meaningfulness of a world Putting queerness in relation to Lacan's *ab sens* and in dialogue with feminist and Afropessimist thought Edelman reads works by Shakespeare Jacobs Almod var Lemmons and Haneke among others to show why queer theory's engagement with queerness necessarily results in a bad education that is destined to teach us nothing

High Wind Life Yves Earhart, AI, 2025-01-25 *High Wind Life* unravels the invisible yet profound role of wind as a sculptor of life exploring how organisms across Earth's most extreme landscapes evolve to thrive in relentless gusts The book's central theme wind as both a creative and destructive evolutionary force comes alive through stories of species mastering survival From albatrosses harnessing gusts to glide effortlessly across oceans to Caribbean lizards whose flattened bodies defy hurricanes the text reveals ingenious physiological and behavioral adaptations Plants too star in this drama grasses flex like suspension bridges while fungi launch spores on precision wind highways These strategies aren't just biological marvels they're urgent lessons for a climate altered world where understanding resilience could safeguard ecosystems Blending biomechanics and ecology *High Wind Life* progresses from individual adaptations to sweeping ecological networks Early chapters decode how wind shapes pollination and seed dispersal later sections link these insights to human challenges like designing wind resistant crops or architecture inspired by termite mounds The book stands out by spotlighting overlooked organisms lichens spiders microbes to challenge animal centric views of adaptation Its narrative style transforms complex concepts into relatable tales using analogies like comparing root systems to underground parachutes By framing wind as a dynamic dialogue between life and environment the book bridges science and storytelling offering a fresh lens on biodiversity's fragility and ingenuity For biologists engineers or curious readers it's a compelling call to see the air not as empty space but as a force that writes the rules of existence
