The Geology of Scotland is greatly expanded from the previous edition with 34 authors contributing to 20 chapters A new
format has been adopted to provide a different perspective on the geology of Scotland A brief introduction is followed by a
chapter outlining some of the important historical aspects that in the 19th century placed Scottish geologists in the forefront
of a new science Scotland is constructed from a number of terranes that finally combined in roughly their present positions
prior to about 410 million years ago Thus the geology of each terrane is described up to the time of amalgamation providing
chapters on the Southern Uplands Midland Valley Highlands Grampian and Hebridean terranes At the end of this section a
brief synthesis summarizes the events that resulted in the amalgamation of the various terranes into the present
configuration Traditional practice is followed in the description of the Old Red Sandstone Carboniferous Permo Trias Jurassic
Cretaceous tertiary and Quaternary strata A separate chapter covers Tertiary igneous rocks An attempt is made to tell the
story of the geological evolution of Scotland rather than catalogue all areas and formations Priority is given to the onshore
geology encouraging the reader to go into the field and visit some of the world class geology on show in Scotland The
chapters are broadly based attempting to integrate the sedimentary and igneous histories and summarize changes in
palaeogeography and palaeoenvironments Economic aspects are covered with chapters on Metalliferous Minerals Bulk
Resources Coal and Hydrocarbons A new departure is the chapter on aspects of Environmental Geology and sustainability
