Education In Two Germani Arthur Hearnden, 2019-03-08 This book has already been published in Germany and has been praised for its objectivity authenticity and originality It is the first book in English to attempt a comparison between the two States the West with its desire for pre 1933 values and the East with its wish to transform the traditional culture through the school system There is an historical introduction an analysis of contrasting objectives and the partial retreat from entrenched ideological positions Education in the Two Germanies Arthur Hearnden, 1974 Estranged Twins Sterling Fishman, Lathar Martin, 1987-01-19 This book a fascinating comparison of the educational systems of East and West Germany demonstrates how since 1949 education has been used to create different and competing societies East Germany has tried to create an ideal socialist state while West Germany has sought to be a model of Western democracy The authors argue that the German tradition of using education to attain social and political goals continues in the two Germanys of the postwar period The authors draw a complete portrait of the constitutional and institutional differences between the systems and of the tensions that exist between theory and practice providing a clear understanding of the general educational problems in Western democracies and Eastern communist states Women in the Two Germanies Harry G. Traditions in German-Speaking Mathematics Education Research Hans Niels Jahnke, Lisa Hefendehl-Hebeker, 2019-02-13 This open access book shares revealing insights into the development of mathematics education research in Germany from 1976 ICME 3 in Karlsruhe to 2016 ICME 13 in Hamburg. How did mathematics education research evolve in the course of these four decades? Which ideas and people were most influential and how did German research interact with the international community? These questions are answered by scholars from a range of fields and in ten thematic sections: 1 a short survey of the development of educational research on mathematics in German speaking countries, 2 subject matter didactics, 3 design science and design research, 4 modelling, 5 mathematics and Bildung, 1810 to 1850, 6 Allgemeinbildung, Mathematical Literacy and Competence Orientation, 7 theory traditions, 8 classroom studies, 9 educational research and 10 large scale studies. During the time span presented here profound changes took place in German speaking mathematics education research. Besides the traditional fields of activity like subject matter didactics or design science completely new areas also emerged which are characterized by various empirical approaches and a closer connection to psychology, sociology, epistemology and general education research. Each chapter presents a respective area of mathematics education in Germany and analyzes its relevance for the development of the research community not only with regard to research findings and methods but also in terms of interaction with the educational system. One of the central aspects in all chapters concerns the constant efforts to find common ground between mathematics and education. In addition readers can benefit from this analysis by comparing the development shown here with the mathematical education research situation in their own country.
