**The Education of a Poker Player** James McManus, 2015-10-19. In writing about poker, Jim McManus has managed to write about everything, and it's glorious. David Sedaris, New York Times bestselling author. James McManus offers up a collection of seven stories narrated by Vincent Killeen, an Irish Catholic altar boy in the late 1950s and early 1960s. Persuaded at age eight by his grandmother that entering the priesthood will guarantee salvation for every member of his family, Vince eagerly commits to attending a Jesuit seminary for high school. As the meaning of a vow of celibacy becomes clearer to him, however, and he is exposed to the irresistible temptations of poker and girls, life as a seminarian begins to seem less appealing. These autobiographical stories are enlightening and evocative, providing keen, often humorous insight into Catholicism, faith, celibacy, and its opposite, as well as America's and increasingly the world's favorite card game. James McManus has been called poker's Shakespeare. He is the New York Times bestselling author of *Positively Fifth Street*, *Murderers*, *Cheetahs*, and *Binion's World Series of Poker and Cowboys Full: The Story of Poker*, among others. He has been the poker columnist for the New York Times and currently writes the history column for *CardPlayer*. His work has also appeared in *Harper's*, *The Believer*, *Paris Review*, *Esquire*, and in *Best American* anthologies for poetry, sports, writing, science, and nature, and magazine writing. He has spoken about poker at Yale, Harvard, Google, Goldman Sachs, and on numerous media outlets, and is the recipient of the Peter Lisagor Award for Sports Journalism and fellowships from the Guggenheim and Rockefeller foundations, among other awards. He teaches at the School of the Art Institute of Chicago.

**Understanding the Impact of Machine Learning on Labor and Education** Joseph Ganem, 2023-06-01. This book provides a novel framework for understanding and revising labor markets and education policies in an era of machine learning. It posits that while learning and knowing both require thinking, learning is fundamentally different than knowing because it results in cognitive processes that change over time. Learning, in contrast to knowing, requires time and agency. Therefore, learning algorithms that enable machines to modify their actions based on real-world experiences are a fundamentally new form of artificial intelligence that have potential to be even more disruptive to labor markets than prior introductions of digital technology. To explore the difference between knowing and learning, Turing's Imitation Game, that he proposed as a test for machine thinking, is expanded to include time dependence. The arguments presented in the book introduce three novel concepts: 1. Comparative

learning advantage This is a concept analogous to comparative labor advantage but arises from the disparate times required to learn new knowledge bases skillsets It is argued that in the future comparative learning advantages between humans and machines will determine their division of labor 2 Two dimensions of job performance expertise and interpersonal Job tasks can be sorted into two broad categories Tasks that require expertise have stable endpoints which makes these tasks inherently repetitive and subject to automation Tasks that are interpersonal are highly context dependent and lack stable endpoints which makes these tasks inherently non routine Humans compared to machines have a comparative learning advantage along the interpersonal dimension which is increasing in value economically 3 The Learning Game is a time dependent version of Turing s Imitation Game It is more than a thought experiment The Learning Game provides a mathematical framework with quantitative criteria for training and assessing comparative learning advantages The book is highly interdisciplinary presenting philosophical arguments in economics artificial intelligence and education It also provides data mathematical analysis and testable criteria that researchers in these fields will find of practical use The book calls for a rethinking of how labor markets operate and how the education system should prepare students for future jobs It concludes with a list of counterintuitive recommendations for future education and labor policies that all stakeholders employers employees educators students and political leaders should heed The Reader of Gentlemen's Mail David Kahn,2008-10-01 One of the most colorful and controversial figures in American intelligence Herbert O Yardley 1889 1958 gave America its best form of information but his fame rests more on his indiscretions than on his achievements In this highly readable biography a premier historian of military intelligence tells Yardley s story and evaluates his impact on the American intelligence community Yardley established the nation s first codebreaking agency in 1917 and his solutions helped the United States win a major diplomatic victory at the 1921 disarmament conference But when his unit was closed in 1929 because gentlemen do not read each other s mail Yardley wrote a best selling memoir that introduced and disclosed codemaking and codebreaking to the public David Kahn de scribes the vicissitudes of Yardley s career including his work in China and Canada offers a capsule history of American intelligence up to World War I and gives a short course in classical codes and ciphers He debunks the accusations that the publication of Yardley s book caused Japan to change its codes and ciphers and that Yardley traitorously sold his solutions to Japan And he asserts that Yardley s disclosures not only did not hurt but actually helped American codebreaking during World War II The Gambler and the Scholars John F. Dooley,2023-04-05 In May 1917 William and Elizebeth Friedman were asked by the U S Army to begin training officers in cryptanalysis and to decrypt intercepted German diplomatic and military communications In June 1917 Herbert Yardley convinced the new head of the Army s Military Intelligence Division to create a code and cipher section for the Army with himself as its head These two seminal events were the beginning of modern American cryptology the growth of which culminated 35 years later with the creation of the National Security Agency Each running their own cryptologic agencies in

**Managerial Overconfidence: Different Thinking through Different Education** Maximilian Margolin, 2014-02-01 In literature overconfidence has been blamed for economic bubbles and crises as well as for international conflicts and wars While education has already been shown to impact one's level of overconfidence previous research focused on the length and profoundness of education This study in contrast examines the connection between overconfidence and the field in which a person has been educated The issues covered are therefore how education and mind set are related why a differentiation between quantitative and qualitative education makes sense in this context and how different mind sets influence an individual's proneness to overconfidence Drawing on the dual process concept of reasoning from psychology it is argued that the focus of one's education may have an influence on individual levels of overconfidence through distinct ways of reasoning that are acquired and practiced during higher education As support for this theory data on the overconfidence of CEOs of the largest German companies is used and experiments for future research on this topic are suggested

**The Competitive Ethos and Democratic Education** John G. Nicholls,1989  
Young children and even infants work hard at mastering various kills and show spontaneous pleasure at their own accomplishment John Nicholls explores the conditions that cause students to lose their unselfconscious involvement in a game or task and become concerned with how they are stacking up against others Charting the development of children s concepts of luck effort and ability he argues that with age they are increasingly prone to take superiority over others as the definition of success An emphasis on interpersonal competition which permeates Western society exacerbates this egotistical tendency and results in diminished accomplishment and alienation from school To overcome these problems Nicholls argues we must become as little children for whom absorption in exploration and accomplishment come naturally even when those around them are more competent This ideal is unlikely to be promoted through technical approaches to education or by the current emphasis on the role of education in economic development Instead Nicholls calls for a progressive approach to education Difficult though it is to implement this approach is most likely to increase equality of motivation for intellectual development substantial accomplishment satisfaction in work and more productive relations with others These are important ideas for anyone interested in achievement motivation for those professionally involved in education and for nonspecialists interested in or worried about how we educate our children
