Electronic Publishing For Physics And Astronomy:

Electronic Publishing for Physics and Astronomy Andre Heck, 2012-12-06 The ship has left the Miraflores Locks let loose from the mules run by the crews of the Panama Canal Commission She has picked up speed while passing under the Bridge of the Americas which links de facto the Northern and Southern parts of the continent and has headed resolutely towards the Pacific Ocean waters along the rows of boats of all kinds waiting to cross the Canal in the other direction Through a layer of tropical clouds the setting Sun is bleakly illuminating the tall white highrises of Panama City on the port side It took a full day to cautiously move through the whole system of locks and cuts Back in the stateroom I open again a working copy of this book and type down this foreword on the pocket computer The last chapter was received the day before while speeding through the Caribbean Sea and my main work as Editor is now over It has been a real pleasure and a great honour to be given the opportunity of compiling this book and interacting with the various contributors through the latest technologies while being sometimes in geographically very different places The quality of the authors the scope of experiences they cover the messages they convey make of this book a unique and timely publication The reader will certainly enjoy as much as I did going through such a variety of well inspired chapters from so many different horizons

Plasma Astrophysics Arnold O. Benz, 2005-11-28 This textbook is intended as an introduction to the physics of solar and stellar coronae emphasizing kinetic plasma processes It is addressed to observational astronomers graduate students and advanced undergraduates without a background in plasma physics Coronal physics is today a vast field with many different aims and goals Sorting out the really important aspects of an observed phenomenon and using the physics best suited for the case is a formidable problem There are already several

excellent books oriented toward the interests of astrophysicists that deal with the magnetohydrodynamics of stellar atmospheres radiation transport and radiation theory In kinetic processes the different particle velocities play an important role This is the case when particle collisions can be neglected for example in very brief phenomena such as one period of a high frequency wave or in effects produced by energetic particles with very long collision times Some of the most persistent problems of solar physics like coronal heating shock waves flare energy release and particle acceleration are likely to be at least partially related to such processes Study of the Sun is not regarded here as an end in itself but as the source of information for more general stellar applications Our understanding of stellar processes relies heavily in turn on our understanding of solar processes Thus an introduction to what is happening in hot dilute coronae necessarily starts with the plasma physics of our nearest star
