Kiyohito Koyama, M Nakano, 1999-01-18. Electrorheological ER fluids and magnetorheological MR suspensions show dramatic and reversible rheological changes when the electric or magnetic field is applied. Over the past several years their performance and reliability have been significantly improved and their potential applications and acceptances have been widened. These fluids may make a tremendous impact on industry and technology. This volume contains a total of 107 papers which are most up to date and which give probably the best information on the state of the art of the ERF/MRS field. The theme of the above conference was the SYNERGY generated by the interaction of the different disciplines relevant to ERF and MRS investigations. To stimulate this theme all lecture sessions included a mixture of papers; one session contained applications, methodology, particle dynamics, structure, characteristics and whatever is germane to the objective of furthering the standing of the subject. Lead-in lectures were given by experts who had not recently been able to explain their work to colleagues in their own discipline. They were also charged with justifying the relevance of their area of work to the ERF/MRS field as a whole.
