**Elementary Topology** Donald W. Blackett, 1967      Explorations in Topology David Gay, 2007-08-07 Explorations in Topology gives students a rich experience with low dimensional topology enhances their geometrical and topological intuition empowers them with new approaches to solving problems and provides them with experiences that would help them make sense of a future more formal topology course The innovative story line style of the text models the problems solving process presents the development of concepts in a natural way and through its informality seduces the reader into engagement with the material The end of chapter Investigations give the reader opportunities to work on a variety of open ended non routine problems and through a modified Moore method to make conjectures from which theorems emerge The students themselves emerge from these experiences owning concepts and results The end of chapter Notes provide historical background to the chapter s ideas introduce standard terminology and make connections with mainstream mathematics The final chapter of projects provides opportunities for continued involvement in research beyond the topics of the book Students begin to solve substantial problems right from the start Ideas unfold through the context of a storyline and students become actively involved The text models the problem solving process presents the development of concepts in a natural way and helps the reader engage with the material      Topological Graph Theory Jonathan L. Gross, Thomas W. Tucker, 2001-01-01

Introductory treatment emphasizes graph imbedding but also covers connections between topological graph theory and other areas of mathematics Authors explore the role of voltage graphs in the derivation of genus formulas explain the Ringel Youngs theorem and examine the genus of a group including imbeddings of Cayley graphs Many figures 1987 edition

*Singular Homology Theory* W.S. Massey, 2012-12-06 This textbook on homology and cohomology theory is geared towards the beginning graduate student Singular homology theory is developed systematically avoiding all unnecessary definitions terminology and technical machinery Wherever possible the geometric motivation behind various algebraic concepts is emphasized The only formal prerequisites are knowledge of the basic facts of abelian groups and point set topology Singular Homology Theory is a continuation of the author s earlier book Algebraic Topology An Introduction which presents such important supplementary material as the theory of the fundamental group and a thorough discussion of 2 dimensional manifolds However this earlier book is not a prerequisite for understanding Singular Homology Theory      *Beyond Geometry*

Peter Pesic, 2007-01-01 Eight essays trace seminal ideas about the foundations of geometry that led to the development of Einstein s general theory of relativity This is the only English language collection of these important papers some of which are extremely hard to find Contributors include Helmholtz Klein Clifford Poincar and Cartan

features There are many informal comments scattered between the formal development of theorems and these are done in a light and pleasant style There is a complete proof of the equivalence of the axiom of choice Zorn's Lemma and well ordering as well as a discussion of the use of these concepts There is also an interesting discussion of the continuum problem The presentation of metric spaces before topological spaces should be welcomed by most students since metric spaces are much closer to the ideas of Euclidean spaces with which they are already familiar Canadian Mathematical Bulletin Kaplansky has a well deserved reputation for his expository talents The selection of topics is excellent Lance Small UC San Diego This book is based on notes from a course on set theory and metric spaces taught by Edwin Spanier and also incorporates with his permission numerous exercises from those notes The volume includes an Appendix that helps bridge the gap between metric and topological spaces a Selected Bibliography and an Index **American Scientist**, 1942 **The Publishers' Trade List Annual**, 1985 Logic for Programming, Artificial Intelligence, and Reasoning Iliano Cervesato, Helmut Veith, Andrei Voronkov, 2008-11-16 This book constitutes the refereed proceedings of the 15th International Conference on Logic for Programming Artificial Intelligence and Reasoning LPAR 2008 which took place in Doha Qatar during November 22-27 2008 The 45 revised full papers presented together with 3 invited talks were carefully revised and selected from 153 submissions The papers address all current issues in automated reasoning computational logic programming languages and their applications and are organized in topical sections on automata linear arithmetic verification knowledge representation proof theory quantified constraints as well as modal and temporal logics *Books cataloged by Tehran Book Processing Centre* Tehran Book Processing Centre, 1971 **Books in Print**, 1993-09 V 1 Authors A-D v 2 Authors E-K v 3 Authors L-R v 4 S-Z v 5 Titles A-D v 6 Titles E-K v 7 Titles L-Q v 8 Titles R-Z v 9 Out of print out of stock indefinitely v 10 Publishers Recent Trends in Combinatorics Andrew Beveridge, Jerrold R.
