*Studies* Máire Messenger Davies,Nick Mosdell,2006 Many very intelligent people don t like dealing with numbers Similarly many gifted scientists are not especially interested in studying people and their cultural behavior In this book we argue that being interested in people and their cultures and helping students and others to use numbers to pursue these interests are not mutually exclusive Research methods are becoming an increasingly important requirement for students of all kinds But many students particularly those in the humanities struggle with concepts drawn from the social sciences and find quantitative and statistical information inaccessible and daunting Nonetheless such concepts are found in nearly all areas of society from market research to opinion polls to psychological studies of human behavior This book provides a simple guide to the process of conducting research in the humanities with special reference to media and culture from the planning stage through the data gathering to the analysis and interpretation of results planning it doing it and understanding it The book shows how students own choice of research topic can be refined into a manageable research question and how the most appropriate methodologies can be applied Each section draws on actual examples from research that the authors and their students have conducted Topics covered include choosing a research question and method instrument design and pilot data practical procedures research with children looking at statistics and interpretation of results **Advances in Flow**

**Research** Stefan Engeser,2012-03-20 The concept of Flow was first explained by Csikszentmihalyi 1975 described as an optimal experience he noted that artists were entirely caught up in their projects working feverishly to finish them and then lose all interest in their work after completion The incentive lies in the act of creativity itself The person feels optimally challenged while totally immersed in the activity At the heart of flow research is the motivational aspect of this experience Flow motivates people to carry out certain activities repeatedly seeking a challenge in the act and looking to improve their skills and abilities In this book this motivational aspect will be imbedded in and related to other theories of intrinsic motivation and empirical work on flow and performance The book provides a review of the current flow research with a focus on rigorous analysis on methodology The author takes the time to present methodological aspects in flow research to qualify empirical work In addition this volume presents neuropsychological considerations and empirical correlates of flow experiences The work also describes various theoretical integrations of the different paths being taken within the field of flow research It presents what has been learned since the beginning of flow research what is still open and how the mission to understand and foster flow experience research should continue **Research Methods in Applied Settings** Jeffrey A.
