Nurse, Constancio Gonzalez, Chris Peers, Nanduri Prabhakar, 2012-10-19 Arterial chemoreceptors are unique structures which continuously monitor changes in arterial blood oxygen carbon dioxide glucose and acid Alterations in these gases are almost instantaneously sensed by arterial chemoreceptors and relayed into a physiological response which restores blood homeostasis Arterial Chemoreception contains updated material regarding the physiology of the primary arterial chemoreceptor the carotid body Moreover this book also explores tantalizing evidence regarding the contribution of the aortic bodies chromaffin cells lung neuroepithelial bodies and brainstem areas involved in monitoring changes in blood gases Furthermore this collection includes data showing the critical importance of these chemoreceptors in the pathophysiology of human disease and possible therapeutic treatments This book is a required text for any researcher in the field of arterial chemoreception for years to come It is also a critical text for physicians searching for bench to bedside treatments for heart failure sleep apnea and pulmonary hypertension      Catalog of Copyright Entries. Claiborne, Suzanne Currie, 2013-11-25 Following the success of the bestselling third edition this newly updated and completely revised fourth edition of *The Physiology of Fishes* provides comprehensive coverage of the most important aspects of the form and function of fishes It covers the most recent advances as well as fundamental subjects such as cardiovascular physiology intestinal transport and gill ion uptake Written by an international group of experts this book contains fresh approaches with completely new treatment of the original topics and the addition of new chapters Muscle plasticity Membranes and Metabolism Oxygen Sensing Endocrine Disruption Pain Perception Cardiac Regeneration Neuronal Regeneration Two decades after the publication of the first edition this book remains the only published single volume work on fish physiology Each chapter contains an extensive bibliography providing readers with the best sources from the primary literature The fourth edition provides an important reference for aquatic biologists ichthyologists fisheries scientists and comparative physiologists      *An Atlas of Comparative Vertebrate Histology* Donald B. McMillan, Richard James Harris, 2018-06-04 *Atlas of Comparative Vertebrate Histology* looks at the histology of a wide range of vertebrates representative of all the major classes and families with examples ranging from amphioxus to primates The authors focus their microscope on commonly seen vertebrates as well as non standard species such as lamprey hagfish dogfish skate rock bass cod river catfish toad amphiuma leopard and

bull frog garter and brown snake Coturnix quail and cowbird The study of comparative histology in the vertebrates helps students and researchers alike understand how various groups have addressed similar problems opening doors to interesting research possibilities Not all vertebrates follow the mammalian model of tissue and organ structure When dealing with unique species we see some structures taken beyond their normal function Comparative histology allows us to understand the structural responses underlying the physiology unique to each vertebrate group Presents the histology of a wide range of vertebrates representative of all the major classes and families with examples ranging from amphioxus to primates Includes an image gallery with over 500 flat images and 50 virtual microscopy slides Contains electronic content features cross linking between text tables and the image gallery

*Airway Chemoreceptors in Vertebrates* Giacomo Zaccane,2019-04-23 This book provides a comprehensive and up to date account of the information available on the morphological physiological and evolutionary aspects of specialized cells distributed within the epithelia of the airways in the vertebrates A lot of work has been done on the cell and molecular biology of these cells which are regarded as as oxygen receptor neuroepithelial cells These chemoreceptors which were conserved throughout evolution have neuroendocrine functions carrying their signals to the central nervous system The chemoreceptor cells are sensors which detect the signal changes in the external and internal environments and play a key role in the survival of various species Studies addressed to the chemoreceptor cell systems in the airways are of great importance for investigating their response to changes in the oxygen and carbon dioxide concentrations in the environment since the future of the planet earth is being threatened by global warming and climate change Praise for the book This volume would be of special interest to researchers who are curious about the evolution of vertebrate respiratory control in general and the regulation of ventilation in nonmammalian vertebrates in particular Wayne L Silver Wake Forest University in The Quarterly Review of Biology Volume 85 Number 2

**The Invertebrates: Acanthocephala, Aschelminthes and Entoprocta** Libbie Henrietta Hyman,1940

**The Oxford Handbook of Evolutionary Medicine** Martin Brüne,Wulf Schiefenhövel,2019-01-31 Medicine is grounded in the natural sciences where biology stands out with regard to our understanding of human physiology and the conditions that cause dysfunction Ironically though evolutionary biology is a relatively disregarded field One reason for this omission is that evolution is deemed a slow process Indeed the macroanatomical features of our species have changed very little in the last 300 000 years A more detailed look however reveals that novel ecological contingencies partly in relation to cultural evolution have brought about subtle changes pertaining to metabolism and immunology including adaptations to dietary innovations as well as adaptations to the exposure to novel pathogens Rapid pathogen evolution and evolution of cancer cells cause major problems for the immune system Moreover many adaptations to past ecologies have actually turned into risk factors for somatic disease and psychological

disorder in our modern worlds i.e mismatch among which epidemics of autoimmune diseases cardiovascular diseases diabetes and obesity as well as several forms of cancer stand out One could add depression anxiety and other psychiatric conditions to the list The Oxford Handbook of Evolutionary Medicine is a compilation of up to date insights into the evolutionary history of ourselves as a species exploring how and why our evolved design may convey vulnerability to disease Written in a classic textbook style emphasising physiology and pathophysiology of all major organ systems the Oxford Handbook of Evolutionary Medicine is valuable reading for students as well as scholars in the fields of medicine biology anthropology and psychology     General Science Quarterly ,1922     **Science Education** ,1922     **Bioengineering Aspects in the Design of Gas Exchangers** John N. Maina,2011-06-24 This book encapsulates over three decades of the author's work on comparative functional respiratory morphology It provides insights into the mechanisms by which respiratory means and processes originated and advanced to their modern states Pertinent cross disciplinary details and facts have been integrated and reexamined in order to arrive at more robust answers to questions regarding the basis of the functional designs of gas exchangers The utilization of oxygen for energy production is an ancient process the development and progression of which were underpinned by dynamic events in the biological physical and chemical worlds Many books that have broached the subject of comparative functional respiratory biology have only described the form and function of the end product the gas exchanger they have scarcely delved into the factors and the conditions that motivated and steered the development from primeval to modern respiratory means and processes This book addresses and answers broad questions concerning the critical synthesis of multidisciplinary data and clarifies previously cryptic aspects of comparative respiratory biology     **Outlines of Zoology** John Arthur Thomson,1892
