Application of the Systems Approach to the Management of Complex Water Systems
Slobodan P. Simonovic, 2020-12-23 During the past five decades we have witnessed a tremendous evolution in water resource system management Three characteristics of this evolution are of particular note First the application of the systems approach to complex water management problems has been established as one of the most important advances in the field of water resource management Second the past five decades have brought a remarkable transformation of attitude in the water resource management community towards environmental concerns and action to address these concerns Third applying the principles of sustainability to water resource decision making requires major changes in the objectives on which decisions are based and an understanding of the complicated inter relationships between existing ecological economic and social factors The Special Issue includes 15 contributions that offer insights into contemporary problems approaches and issues related to the management of complex water resources systems It will be presumptuous to say that these 15 contributions characterize the success or failure of the systems approach to support water resources decision making However these contributions offer interesting lessons from current experiences and highlight possible future work

Water Resources Engineering Larry W. Mays, 2001 A straight forward easy to understand presentation of hydraulic and hydrologic processes using the control volume approach The author extends these processes into practical applications for water use and water excess including water distribution systems stormwater control and flood storage systems

Finite Elements in Water Resources J. P. Laible, 1984 This book is the edited proceedings of the Fifth International Conference on Finite Elements in Water Resources held at the University of Vermont USA in June 1984 This Conference continues the successful series started at Princeton University in 1976 followed by the Conference in Imperial College London UK in 1978 the third Conference at the University of Mississippi USA in 1980 and the fourth at the University of Hannover

Germany in 1982 The objective of this Conference is to provide engineers and scientists interested in water resources with the state of the art on finite element modelling The Proceedings review the basic theory and applications of the technique in groundwater and seepage transport phenomena viscous flow river lake and ocean modelling The fundamentals of the numerical techniques employed in finite elements are also discussed Many applications illustrate the versatility and generality of the Finite Element Method for the simulation of a wide range of problems in water resources More recent schemes in particular boundary elements are also presented together with a series of advanced numerical techniques The Conference has become an internationally accepted forum for the presentation of new developments of finite elements in water resources techniques Because of this a large number of abstracts were submitted to the Organizing Committee and it is our only regret that it was impossible to accept all these contributions The overwhelming response to our Call for Papers has ensured the high quality of these proceedings
