High Temperature Corrosion César A. C.

Sequeira, 2018-12-14 Reviews the science and engineering of high temperature corrosion and provides guidelines for selecting the best materials for an array of system processes. High temperature corrosion (HTC) is a widespread problem in an array of industries including power generation, aerospace, automotive, and mineral and chemical processing, to name a few. This book provides engineers, physicists, and chemists with a balanced presentation of all relevant basic science and engineering aspects of high temperature corrosion. It covers most HTC types including oxidation, sulfidation, nitridation, molten salts, fuel ash corrosion, H₂S/H₂ corrosion, molten fluoride, HF corrosion, and carburization. It also provides corrosion data essential for making the appropriate choices of candidate materials for high temperature service in process conditions. A form of corrosion that does not require the presence of liquids, high temperature corrosion occurs due to the interaction at high temperatures of gases, liquids, or solids with materials. HTC is a subject of increasing importance in many areas of science and engineering, and students, researchers, and engineers need to be aware of the nature of the processes that occur in high temperature materials and equipment in common use today, especially in the chemical, gas, petroleum, electric power, metal manufacturing, automotive, and nuclear industries. Provides engineers and scientists with the essential data needed to

make the most informed decisions on materials selection Includes up to date information accompanied by more than 1 000 references 80% of which from within the past fifteen years Includes details on systems of critical engineering importance especially the corrosion induced by low energy radionuclides Includes practical guidelines for testing and research in HTC along with both the European and International Standards for high temperature corrosion engineering Offering balanced in depth coverage of the fundamental science behind and engineering of HTC High Temperature Corrosion Fundamentals and Engineering is a valuable resource for academic researchers students and professionals in the material sciences solid state physics solid state chemistry electrochemistry metallurgy and mechanical chemical and structural engineers **Technical Abstract Bulletin** Defense Documentation Center (U.S.),1964 Technical Manual United States Department of the Army,1970
