Selecting Models from Data P. Cheeseman, R.W. Oldford, 2012-12-06 This volume is a selection of papers presented at the Fourth International Workshop on Artificial Intelligence and Statistics held in January 1993 These biennial workshops have succeeded in bringing together researchers from Artificial Intelligence and from Statistics to discuss problems of mutual interest The exchange has broadened research in both fields and has strongly encouraged interdisciplinary work The theme of the 1993 AI and Statistics workshop was Selecting Models from Data The papers in this volume attest to the diversity of approaches to model selection and to the ubiquity of the problem Both statistics and artificial intelligence have independently developed approaches to model selection and the corresponding algorithms to implement them But as these papers make clear there is a high degree of overlap between the different approaches In particular there is agreement that the fundamental problem is the avoidance of overfitting i.e. where a model fits the given data very closely but is a poor predictor for new data in other words the model has partly fitted the noise in the original data

demonstrations class and laboratory projects and other techniques to enhance teaching and learning in both the introductory as well as advanced courses in the discipline This section is organized so as to parallel the order of topics found in most introductory psychology textbooks Intended for academicians who teach the introductory psychology course and or oversee grad assistants who teach the course all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology

*Liberal Education and the Idea of the University*  
Karim Dharamsi, James Zimmer, 2019-05-07

The idea of the university and the idea of liberal education share a family resemblance However it is not always explicitly clear what they have in common and what differentiates them This collection brings together arguments and reflections on the nature of the university and the place of liberal learning in the 21st century It is divided into two parts In the first part authors examine the values and ideals that shape our understanding of liberal learning and the university in the second part authors consider pedagogies informing our practices asking after what underlying presuppositions when made explicit guide our liberal education classrooms in higher education Unique in its approaches this volume includes defenses of liberal education s intrinsic value the commodification of some of its best ideals as well as utilitarian defenses that challenge some orthodox conceptions of liberal learning and its justifications Each in its own right understands liberal learning as essential to the defense of a democratic order On the pedagogical side included are essays that defend a view of liberal education from the vantage of STEM subjects including architecture as well as those we typically associate with the liberal arts This volume will aid academics and students seeking to better grasp an understanding of liberal education but also those seeking to advance their pedagogical ideas about liberal learning Researchers and students in education higher education and those interested in the liberal arts and sciences will find this volume a useful addition to their collection
